

THE CALL

ON TRACK, NOTHING TO FIX

Sample is on track. The projection sits at 551 to 671 marks, at or above the 610 marks this sitting was measured against, the errors are pace-shaped rather than knowledge-shaped, and no topic is failing. Our call is that nothing needs to change. Keep the routine, protect the pace.

This sitting was scored in Readiness mode, against the real blueprint at the real pace, which is the Class 11 and 12 question: where do I stand today.

DOMINANT ERROR PATTERN

Mixed error pattern

Losses split between rushing (0 percent) and concept gaps (5 percent), with no single dominant cause.

STRENGTHS FIRST

Physics is this profile's strongest section, at roughly the 98th percentile. Protect it: the commonest way to lose a strong subject is to stop practising it while rescuing a weak one.

WHERE THE STANDING SITS: NEET SCORE OUT OF 720

No school year was declared at the start of this sitting. The standing is read against the Class 12 cohort these norms are written for, with no adjustment. We adjust only on a declared class, never on a guess, because a guessed adjustment moves a standing silently. Projected **551 to 671** on the NEET score out of 720, around a midpoint of **644**. A diagnostic that hands you one exact number is guessing. Read the whole band as equally likely.

Measured against: a government MBBS seat, which is 610 marks on this scale (*product default, no goal was stated at enrolment*). Page two carries the distance to it.

WHAT THIS EXAM SAYS THAT A SCORE ALONE DOES NOT

• Biology came in at 90 percent against 86.7 percent in Physics and Chemistry, a difference of 3.3 percentage points. Biology and the physical sciences are running level. That is the most robust shape a NEET profile can have, because no half of the paper is propping up the other, and it means further work can go wherever the topic gaps are rather than wherever the subject gap is. Biology is 90 of NEET's 180 questions and 360 of its 720 marks. This diagnostic mirrors that share exactly.

WHAT THE NEXT FOUR PAGES DO

What this hour measured: 60 questions across 4 subjects, run at 60 seconds a question, which is NEET's own pace. It is a short instrument by design, so every figure in here prints as a range and none of it pretends to be a mock result.

- | | | |
|----------|-------------------------|---|
| 1 | THE CALL | The verdict and the one sentence behind it, before any number. |
| 2 | STANDING | Each subject against the field, and what the paper actually scored under the real marking scheme. |
| 3 | SPEED × ACCURACY | Whether the losses belong to the clock or to the content. |
| 4 | ERROR FORENSICS | Which topics carried the loss, and what this diagnostic deliberately did not measure. |
| 5 | THE PLAN | Four weeks, free material first, and one paragraph written for the parent. |

Provisional norms: anchored to published the NTA statistics for NEET UG candidates, and deliberately banded wide until our own pilot data replaces them, including the declared accuracy step per school year the grade reading uses · No school year was declared for this sitting, so the percentiles are read against the Class 12 cohort with no grade adjustment · Independent diagnostic, not affiliated with or endorsed by the NTA

Subject by subject, and what it scored

WHERE EACH SUBJECT SITS AGAINST THE FIELD

THE MARKS, UNDER THE REAL MARKING SCHEME: PLUS 4 FOR A CORRECT ANSWER, MINUS 1 FOR A WRONG ONE

SCORED **209** out of 240 available | ATTEMPT RATE **93%** 4 left blank of 60 | ACCURACY WHEN ATTEMPTED **95%** 53 right of 56 attempted

Correct Wrong, costs marks Left blank, costs nothing

Under NEET's marking (plus four for a correct answer and minus one for a wrong one), this sitting scored 209 out of 240, with an attempt rate of 93 percent. Nothing here suggests marks are being given back to over-attempting, which is worth knowing: it is the commonest avoidable loss in this exam.

The rule worth keeping anyway: below about 20 percent accuracy on a topic, this exam's own arithmetic makes attempting a losing bet. It is not costing this student marks today, and the cheapest way to keep it that way is to know the number before the paper starts rather than after it.

GAP TO TARGET, AND THE TIME AVAILABLE

Goal: a government MBBS seat, at 610 marks (*product default, no goal was stated at enrolment*).

The projected band already reaches it. The work from here is protecting that standing under real conditions, not chasing more syllabus.

Runway: about 14 weeks to the date on file.

The signature read

HOW TO READ IT

Each dot is one subject of this sitting, plotted by real pace across against accuracy up. Accuracy here counts every question, so an unanswered one counts against it, exactly as it does in the projection. The dashed lines are the paper's own pace and the accuracy the stated target demands.

Fast and inaccurate is the highest-yield corner: those marks come back with discipline, not new learning. **Slow and accurate** means the knowledge is there and the clock is the opponent.

Two dots sitting on top of each other simply means those subjects were worked at the same pace and the same accuracy.

PACE INDEX (1.0 = real exam pace; left = faster)

PACING VERDICTS (MEDIAN SECONDS A QUESTION AGAINST THE REAL PAPER'S OWN PACE)

SUBJECT	MEDIAN VS BENCH	PAGE INDEX	ZONE	ENDURANCE
Physics	62.4s vs 60s	PI 1.04	exam pace	accuracy fell 25 pts by the final third
Chemistry	62.4s vs 60s	PI 1.04	exam pace	accuracy fell 25 pts by the final third
Botany	62.4s vs 60s	PI 1.04	exam pace	steady
Zoology	62.4s vs 60s	PI 1.04	exam pace	accuracy fell 25 pts by the final third

WHAT THE CORNERS SAY TO DO NEXT

The clock is the opponent in Physics, Chemistry, Botany, Zoology. The accuracy is already where the target needs it; it is simply arriving too slowly. That is a timing problem and it responds to timed practice.

WHAT THIS MEANS

The projection prints as a range, not a single number, because a diagnostic this length cannot honestly resolve any finer, and because the NTA will not either until results day. Read the whole band as equally likely. On this evidence the target of a government MBBS seat is already inside the band. Qualifying percentiles and government-seat closing scores move every year and differ by state quota and category. Any figure quoted from a recent cycle is a range, not a promise.

4 questions in this sitting went to pacing (rushing, the final-third squeeze, or never being reached) rather than to not knowing the answer. Pacing questions are the cheapest to recover: every one of them is already within reach.

Why the marks were lost

EVERY LOST MARK, CLASSIFIED (SHARE OF EACH SUBJECT'S QUESTIONS)

WHAT THE FOUR COLOURS MEAN, AND WHY THEY NEED DIFFERENT ANSWERS

RUSHED

Answered in under 40 percent of the time the question is worth. The knowledge was often there and the question was not read.

CONCEPT GAP

Answered after full engagement with the clock and still wrong. These are teachable, and they are the most fixable kind of loss there is.

TIME PRESSURE

Lost in the final third of a section that was already running slow. The section clock, not the topic, is what beat these.

NEVER REACHED

The question was not seen. Pure pacing loss, recoverable without learning anything new.

NAMED TOPICS (A PATTERN IS ONLY NAMED AFTER 3 OR MORE HITS)

No single topic or misconception appeared often enough to name. A pattern is only printed here after three or more hits, because two is a coincidence and naming it would send a student to rebuild something that was never broken.

TOPIC MAP: WHAT IS MASTERED, WHAT IS DEVELOPING, WHERE TO FOCUS

Human health & immunity 50% **DEVELOPING**

Biomolecules & enzymes 100% **MASTERED**

Biotechnology 100% **MASTERED**

Cell structure & division 100% **MASTERED**

Ecology & environment 100% **MASTERED**

Electricity & magnetism 100% **MASTERED**

Evolution 100% **MASTERED**

Genetics & inheritance 100% **MASTERED**

Human physiology 100% **MASTERED**

Inorganic chemistry 100% **MASTERED**

Mechanics 100% **MASTERED**

Modern physics 100% **MASTERED**

Optics 100% **MASTERED**

Organic chemistry 80% **MASTERED**

Physical chemistry 100% **MASTERED**

Diversity of plant life 100% **MASTERED**

Plant physiology 100% **MASTERED**

Plant anatomy & tissues 100% **MASTERED**

Reproduction 100% **MASTERED**

Two students with the same total can carry completely different maps. The plan overleaf works this map, not the total.

Four weeks to protect what is already there

Nothing in this plan costs money. The work is rehearsal, not new syllabus.

Week 1

• One full NEET paper at real timing, in one sitting, no pauses. Classify every error the way this report does: rushed, concept gap, or never reached.

Week 2

• Drill only the errors classified as rushed. The aim is pace discipline, not new material.

Week 3

• Second full paper at real timing. Compare the error mix against week one rather than the score.

Week 4

• Light revision and sleep. Do not add a new source in the final week. Confidence is a resource and cramming spends it.

DATES, REGISTRATION AND THE NUMBERS PEOPLE QUOTE AT YOU

Registration and exam dates for NEET UG are published by the NTA and change every year, so check the official notification rather than any secondary source, including this one. With about 14 weeks in hand, build the concepts first and bring the clock in later. That order matters and it is usually done backwards.

WHERE TO WORK, IN THIS ORDER

- **NCERT Biology, cover to cover** (free, ncert.nic.in) plus the official NTA past papers, because Biology alone is half of NEET, 90 of the 180 questions and 360 of the 720 marks, and the NMC-prescribed syllabus for it is the Class 11 and 12 course those two books cover
- **This report's own error categories**, applied to every practice paper from here on. Classifying an error is most of fixing it.
- Nothing else. This standing needs no formal training: the official material above is free and it is enough.

FOR THE PARENT: THE WHOLE REPORT IN ONE PARAGRAPH

Sample's sitting produced a projected range of 551 to 671 marks on the 720-mark scale for NEET UG. Our call is that nothing needs to change. The free official material and the four-week plan inside protect this standing. 4 of the lost questions went to pacing rather than to ability. Those come back with practice discipline.

Please read this one gently. It is a single hour of a student's life, measured honestly and reported without flattery, and it is a starting point rather than a verdict. Every figure here is a range because a diagnostic this length cannot resolve any finer, and the NTA will not publish a real number until results day. Nothing on these five pages says anything about how hard this student works or how much they can achieve.

There is nothing to buy at the end of this report, and that is the finding. The verdict above says this standing needs no formal training, so the page ends on the plan rather than on a next step. Everything the plan asks for is listed above, it is free, and it is enough.
